

AASCP Zoom Lecture June 2nd, 7:30pm (EST)
Benjamin Bieber, M.D., "Diagnosis and Treatment of Extra-articular Pain in Regenerative Medicine"

Benjamin Bieber, M.D graduated from [Emory University](#) where he obtained his Bachelor of Science in Biology. Dr. Bieber's internship was in surgery at Saint Barnabas Medical Center in Livingston, New Jersey. He then completed his physical medicine and rehabilitation residency at the world-renowned Rusk Institute located at the New York University Medical Center. Immediately after his residency training Dr. Bieber spent time with Dr. Hans Kraus, one of the founding members of Sports Medicine and President Kennedy's back doctor. Dr. Bieber then became Board Certified in Physical Medicine and Rehabilitation. During Dr. Bieber's post-graduate training, he was fortunate enough to be mentored by Dr. Andrew Fischer, internationally recognized in the treatment of myofascial pain, with the use of his invented diagnostic tools and injection techniques. Dr. Bieber has written a chapter on trigger point injections in a 2-volume textbook called

"Spinal Care and Treatment" represented by the spine department from New York University Langone Medical Center. Dr. Bieber extensively utilizes diagnostic and interventional musculoskeletal ultrasound in his practice. The use of musculoskeletal ultrasound allows him to diagnose soft tissue injuries and allows for accurate needle placement, which offers a significant increase in quality care to his patients.
